

# MOD suite

## LEARNING EVENT

*Presented by The Vulcan Design Team*

### VISIT OUR LEARNING SESSION TO LEARN ABOUT THE LATEST IN COOKLINE SOLUTIONS.

During your visit we will focus on cookline design solutions that offer flexibility, adaptability, and modularity — while addressing labor, production, food quality, and profit expectations in the cookline design.

- ▶ A new Vulcan MOD suite will be on site! We will explore the aesthetic, functional, and technical attributes of a new Vulcan exclusive, featuring true modular, changeable, and adaptable working platforms. This is the new generation of suite products that are far more practical than the traditional “Island Suite”.
- ▶ Enjoy a culinary experience, as we see and discuss how practical modular design translates to profit-producing cooklines.
- ▶ We will share drawings and renderings that demonstrate the power of accurate Revit parametric modeling to convey cookline design solution with clients.
- ▶ We will discuss de-carbonization initiatives and the impact on design, and explore practical application of electric and induction solutions in the cookline.
- ▶ We will demonstrate and discuss the all new Vulcan ChefsCombi™, which can also be integrated into the MOD Suite.
